# **How This API Document Is Organized**

This API (Application Programming Interface) document has pages corresponding to the items in the navigation bar, described as follows.

#### Overview

The <u>Overview</u> page is the front page of this API document and provides a list of all packages with a summary for each. This page can also contain an overall description of the set of packages.

## Package

Each package has a page that contains a list of its classes and interfaces, with a summary for each. These pages may contain six categories:

- **♦** Interfaces
- **♦** Classes
- ♦ Enums
- **♦** Exceptions
- ♦ Errors
- ♦ Annotation Types

## Class or Interface

Each class, interface, nested class and nested interface has its own separate page. Each of these pages has three sections consisting of a class/interface description, summary tables, and detailed member descriptions:

- ♦ Class Inheritance Diagram
- ◆ Direct Subclasses
- ♦ All Known Subinterfaces
- ♦ All Known Implementing Classes
- ♦ Class or Interface Declaration
- ♦ Class or Interface Description
- ♦ Nested Class Summary
- ♦ Field Summary
- ♦ Property Summary

- **♦** Constructor Summary
- ♦ Method Summary
- ♦ Field Details
- ♦ Property Details
- ♦ Constructor Details
- ♦ Method Details

Each summary entry contains the first sentence from the detailed description for that item. The summary entries are alphabetical, while the detailed descriptions are in the order they appear in the source code. This preserves the logical groupings established by the programmer.

## Annotation Type

Each annotation type has its own separate page with the following sections:

- ♦ Annotation Type Declaration
- ♦ Annotation Type Description
- ♦ Required Element Summary
- ♦ Optional Element Summary
- ♦ Element Details

### \*Enum

Each enum has its own separate page with the following sections:

- ♦ Enum Declaration
- ♦ Enum Description
- ♦ Enum Constant Summary
- ♦ Enum Constant Details

## Tree (Class Hierarchy)

There is a <u>Class Hierarchy</u> page for all packages, plus a hierarchy for each package. Each hierarchy page contains a list of classes and a list of interfaces. Classes are organized by inheritance structure starting with java.lang.Object. Interfaces do not inherit from java.lang.Object.

- When viewing the Overview page, clicking on "Tree" displays the hierarchy for all packages.
- ♦ When viewing a particular package, class or interface page, clicking on "Tree" displays the hierarchy for only that package.

## Deprecated API

The <u>Deprecated API</u> page lists all of the API that have been deprecated. A deprecated API is not recommended for use, generally due to improvements, and a replacement API is usually given. Deprecated APIs may be removed in future implementations.

#### Index

The <u>Index</u> contains an alphabetic index of all classes, interfaces, constructors, methods, and fields, as well as lists of all packages and all classes.

Class or Interface 7

#### Serialized Form

Each serializable or externalizable class has a description of its serialization fields and methods. This information is of interest to re-implementors, not to developers using the API. While there is no link in the navigation bar, you can get to this information by going to any serialized class and clicking "Serialized Form" in the "See also" section of the class description.

### Constant Field Values

The Constant Field Values page lists the static final fields and their values.

#### Search

You can search for definitions of modules, packages, types, fields, methods and other terms defined in the API, using some or all of the name. "Camel-case" abbreviations are supported: for example, "InpStr" will find "InputStream" and "InputStreamReader".

This help file applies to API documentation generated by the standard doclet. Skip navigation links

Card (int number, java.lang.String ability, javax.swing.ImageIcon image)

Constructor

Parameters:

number -

## Method Details

### getNumber

public int getNumber()

Accessor

Returns:

number of card

#### setNumber

public void setNumber (int number)

Transformer Postcondition Sets number of card

Parameters:

number -

## setAbility

public void setAbility (java.lang.String ability)

Transformer Postcondition Sets ability of card

Parameters:

ability -

## getAbility

public java.lang.String getAbility()

Accessor PostCondition Returns ability of card

Returns:

ability

Field Details 20

### movePawn

public abstract boolean movePawn (Pawn pawn, Deck deck)

**Observer** Checks if the pawn can play the card **Postcondition** Returns TRUE if the pawn can play the card

Parameters:

pawn -

deck -

#### getImage

public javax.swing.ImageIcon getImage()

Accessor Postcondtion Returns the image of the card

Returns:

image

## Method Details

createDeck

private void createDeck() Creates deck, initializes deck cards, players and pawns

• init table

public void init\_table()
Setting up the board

## init\_pawnsnplayers

public void init\_pawnsnplayers()
Initializing the pawns and the players

• shuffle

public void shuffle()
Shuffles the cards using Random

• card\_pick

```
public <u>Card</u> card_pick (java.util.List<u><Car</u>d> deck)
Picks card and deletes element from list
Parameters:

deck -
Returns:
the card pick
```

pawnRed1 55

## check\_emptyDeck

```
public void check_emptyDeck (java.util.List<br/>
Checks if deck is empty<br/>
Parameters:<br/>
deck -
```

### • move

### + check fold

public boolean check\_fold()
Checks if player can fold
Returns:

### C

Card - Class in Model.Card

**Abstract class** Cards

<u>Card(int, String, ImageIcon)</u> - Constructor for class Model.Card.<u>Card</u> <u>Constructor</u>

card pick(List<Card>) - Method in class Model.Deck.Deck

Picks card and deletes element from list

<u>CARD RANK</u> - Static variable in class Model.Deck.<u>Deck</u>

check emptyDeck(List<Deck>) - Method in class Model.Deck.Deck

Checks if deck is empty

check fold() - Method in class Model.Deck.Deck

Checks if player can fold

check move() - Method in class Controller.Controller

If all conditions are true move the pawn

checkPawn(Pawn) - Method in class Model.Square.Square

**Observer** Checks if there is a pawn on the square

<u>checkPlays(Player)</u> - Method in class Model.Player.<u>Player</u>

color - Variable in class Model.Pawn.Pawn

<u>color</u> - Variable in class Model.Player.<u>Player</u>

color - Variable in class Model.Square.Square

**Controller** - package Controller

<u>Controller</u> - Class in <u>Controller</u>

<u>Controller()</u> - Constructor for class Controller. <u>Controller</u>

Index 107

createCards() - Method in class View.<u>View</u>

Creates Card Area

createCardText() - Method in class View.View

Creates Text under Cards

createDeck() - Method in class Model.Deck.Deck

Creates deck, initializes deck cards, players and pawns

createFold() - Method in class View.View

Creates Fold button

createGreenBackground() - Method in class View.View

Creates the Green background

createHome() - Method in class View.View

Creates Home Squares

createInfobox() - Method in class View.View

Creates Info Box

createLogo() - Method in class View.View

Creates Logo Photo

createMenu() - Method in class View.View

Creates Menu Bar

createPawns() - Method in class View.View

Creates Pawns

createPhotoSquare() - Method in class View.View

Creates Squares with photo

createSquares() - Method in class View.View

Create Squares Area

createStart() - Method in class View.View

**Creates Start Squares**

### G

getAbility() - Method in class Model.Card.Card

Accessor PostCondition Returns ability of card

getColor() - Method in class Model.Pawn.Pawn

Accessor Postcondition Returns the color of the pawn

getColor() - Method in class Model.Player.Player

**Accessor Postcondtions** Returns color of player

getColor() - Method in class Model.Square.Square

Accessor Postcondition Returns the color of the square

getImage() - Method in class Model.Card.Card

**Accessor Postcondtion** Returns the image of the card

getImage() - Method in class Model.Pawn.Pawn

Accessor Postcondtion Returns the image of the pawn

getNumber() - Method in class Model.Card.Card

Accessor

getPawn1() - Method in class Model.Player.Player

**Accessor Postcondtions** Returns pawn 1 of player

getPawn2() - Method in class Model.Player.Player

**Accessor Postcondtions** Returns pawn 2 of player

getPawnOpponent(Pawn) - Method in class Model.Card.NumberElevenCard

Checks the pawn of the opponent for later use on movePawn

getPlayer() - Method in class Model.Square.HomeSquare

Accessor Postcondtion Returns the player/owner of the start square

getPlayer() - Method in class Model.Square.SafetyZoneSquare

**Accessor Postcondtion** Returns the player/owner of the start square <a href="mailto:getPlayer">getPlayer</a>() - Method in class Model.Square.<a href="mailto:StartSquare">StartSquare</a>

**Accessor Postcondtion** Returns the player/owner of the start square <a href="mailto:getPosition(">getPosition()</a> - Method in class Model.Square.<a href="mailto:Square">Square</a>

**Accessor Postcondition** Returns the position of square <a href="mailto:getSquare()">getSquare()</a> - Method in class Model.Pawn.Pawn

**Accessor Postcondition** Returns the square of the pawn

### S

<u>SafetyZoneSquare</u> - Class in <u>Model.Square</u>

<u>SafetyZoneSquare(int, String, ImageIcon)</u> - Constructor for class Model.Square.<u>SafetyZoneSquare</u>

Constructor

setAbility(String) - Method in class Model.Card.Card

Transformer Postcondition Sets ability of card

setColor(String) - Method in class Model.Pawn.Pawn

**Transformer Postcondition** Sets the color of the pawn

setColor(String) - Method in class Model.Player.Player

**Transformer Postcondition** Sets color of player

setColor(String) - Method in class Model.Square.Square

**Transformer Postcondition** Sets the color of the square

setNumber(int) - Method in class Model.Card.Card

Transformer Postcondition Sets number of card

setPawn1(Pawn) - Method in class Model.Player.Player

**Transformer Postcondition** Sets pawn 1 of player

setPawn2(Pawn) - Method in class Model.Player.Player

**Transformer Postcondition** Sets pawn 2 of player

setPlayer(Player) - Method in class Model.Square.HomeSquare

Transformer Postcondtion Sets the player/owner of the start square

setPlayer(Player) - Method in class Model.Square.SafetyZoneSquare

**Transformer Postcondtion** Sets the player/owner of the start square

setPlayer(Player) - Method in class Model.Square.StartSquare

Transformer Postcondtion Sets the player/owner of the start square

setPosition(int) - Method in class Model.Square.Square

**Transformer Postcondition** Sets the position of the square

setSquare(Square) - Method in class Model.Pawn.Pawn

**Transformer Postcondition** Sets the square of the pawn

setState(boolean) - Method in class Model.Pawn.Pawn

**Transformer Postcondition** Sets the state of the pawn

setTurn(boolean) - Method in class Controller.Controller

**Transformer Postcondition** Sets Turn of player

shuffle() - Method in class Model.Deck.Deck

Shuffles the cards using Random

SimpleNumberCard - Class in Model.Card

Class for numbered cards

 $\underline{SimpleNumberCard(int, String, ImageIcon)} - Constructor\ for\ class\ Model. Card. \underline{SimpleNumberCard}$ 

Constructor

SimpleSquare - Class in Model.Square

<u>SimpleSquare(int, String)</u> - Constructor for class Model.Square.<u>SimpleSquare</u>

Constructor

SlideSquare - Class in Model.Square

<u>SlideSquare(int, String, ImageIcon)</u> - Constructor for class Model.Square.<u>SlideSquare</u>

Constructor

SorryCard - Class in Model.Card

SorryCard(int) - Constructor for class Model.Card.SorryCard

Constructor

split(Pawn, Pawn, int, int) - Method in class Model.Card.NumberSevenCard

**Observer Postcondition** Returns if the split of card 7 can be played out

square - Variable in class Model.Pawn.Pawn

Square - Class in Model.Square

**Abstract class** Square

Square(int, String, ImageIcon) - Constructor for class Model.Square.Square

Constructor

StartSlideSquare - Class in Model.Square

<u>StartSlideSquare(int, String, ImageIcon)</u> - Constructor for class Model.Square.<u>StartSlideSquare</u>

<u>Constructor</u>

StartSquare - Class in Model.Square

<u>StartSquare(int, String, ImageIcon)</u> - Constructor for class Model.Square.<u>StartSquare</u>

Constructor

state - Variable in class Model.Pawn.Pawn
